Sl.No.	Submitted By	Submitted	Description	Detected Sprint	Assigned To	Type Of Defect	Action Taken	Action Taken	Status(Open/Cl	Remarks
1	Akshaya V	22-Sep-26	Filename parsing corrupted document metadata.	Sprint 2	Akshaya V	Logical	Corrected how file names are parsed so company and fiscal year are read properly, then re-indexed the affected documents.	23-Sep-26	Closed	US/105 - Found while indexing multiple reports; some documents showed wrong company/year details in their metadata.
2	Akshaya V	24-Sep-26	Extraction confused revenue values with EPS values.	Sprint 2	Akshaya V	Logical	Fixed the metric matching so revenue is not confused with EPS, then rechecked the extracted figures against the annual report.	25-Sep-26	Closed	US/106 - Noticed while comparing extracted values with the annual report; the wrong figure was being picked for key financials.
3	Akshaya V	6-Oct-26	Fiscal year collisions between reports.	Sprint 3	Akshaya V	Logical	Updated the fiscal-year handling so reports from different years are kept separate, then re-tested trends and comparisons.	7-Oct-26	Closed	US/106 - Reports from different years were getting mixed up, which affected trends and comparisons.
4	Akshaya V	7-Oct-26	Unit scaling errors in extracted financial values.	Sprint 3	Akshaya V	Logical	Added unit normalization so values from different reports use the same scale, then verified the key figures again.	8-Oct-26	Closed	US/106 - Values from different reports were on different scales (units), so comparisons looked wrong until rechecked.
5	Akshaya V	15-Oct-26	Research Copilot sometimes returns an insufficient-information message even when another part of the application (Visual Analytics) can retrieve the requested financial metric. Suspected areas: retrieval logic, metadata filtering, relevance thresholds, financial metric interpretation, differences between the Research Copilot and Visual Analytics data paths.	Sprint 4	Akshaya V	Logical	Compared the Research Copilot and Visual Analytics data paths and started checking retrieval, metadata filters and relevance thresholds; fix still to be tested.	16-Oct-26	Open	US/110 - Noticed while preparing the project demo for the mock assessment (15 Oct); the same metric could be retrieved in Visual Analytics, so the two data paths seem to behave differently. Needs more testing before it can be closed.
